Delos Insurance Solutions
Insurance Product Team
548 Market Street, Suite 77584
San Francisco, CA 94104

Dear Delos Insurance Product Team,

Your website says Delos prices risk with Python code, not just a zip code. That sentence is why I am applying. I hold a BS in Computer Science with a 3.8 GPA, I am currently pursuing an MS in Finance and Investment Management at Sacred Heart University, and I have spent the last three years writing code that turns messy market data into decisions with real money behind them. The Actuarial Analyst role, sitting between pricing, data quality, and a proprietary wildfire model, is the kind of work I want to build a career on, and the fact that you are doing it in markets other carriers are leaving makes it matter.

The responsibility I can speak to most directly is data analysis and quality. From 2022 to 2025 I taught myself MQL5 and NinjaScript, designed algorithmic trading tools for futures markets, and built software that generates futures trading strategies. I marketed it myself and sold packages to roughly five clients, producing four-figure revenue. Trading software fails silently when the data feeding it is wrong, so I learned early to validate inputs, investigate every discrepancy, and document exactly what each assumption means. I also did contract work converting clients' manual trading strategies into automated algorithms, which meant extracting the precise logic behind each decision and encoding it so a machine could reproduce it without error. That is the same discipline your posting describes for rating validation: calculate the expected result independently, compare it to the system, and find out why they differ. During my internship at Edward Jones I performed data entry and validation on client records, where accuracy was the entire job. I am proficient in Python and comfortable in C#. My background is in code rather than spreadsheets, but the Excel functions you list, lookups, SUMIFS, PivotTables, and conditional formulas, are logic I already write every day, and I pick up tooling fast.

I want to be honest about what I do not have. I have not sat for an actuarial exam, and I have not worked in P&C insurance. What I bring instead is a strong quantitative foundation from two degrees, a record of learning hard things on my own, and a work ethic I can prove. I founded Rodriguez Pressure Washing LLC in 2023 and have run every part of it since, including knocking on more than 1,000 doors to build it, which also means I have spent a lot of time looking closely at the outside of homes. Playing D1 soccer for a team ranked third nationally in the NAIA, and earning the Champions of Character Award, taught me attention to detail under pressure and how to be useful to a team. I am also bilingual in Spanish.

I am hardworking, I learn fast, and I take real pride in getting things right the first time. I would welcome the chance to talk about how I can support Delos's pricing and portfolio work as you expand into new states. Thank you for your time and consideration.

Sincerely,

Diego Rodriguez
